

"The rock was still wet. The animal was glistening, like it was still swimming," recalls Hou Xianguang. Hou discovered the unusual fossil while surveying rocks as a paleontology graduate student in 1984, near the Chinese town of Chengjiang. "My teachers always talked about the Burgess Shale animals. It looked like one of them. My hands began to shake." Hou had indeed found a *Naraoia* like those from Canada. However, Hou's animal was 15 million years older than its Canadian relatives.

It can be inferred that Hou Xianguang's "hands began to shake", because he was:

- (A) afraid that he might lose the fossil
- (B) worried about the implications of his finding
- (C) concerned that he might not get credit for his work
- (D) uncertain about the authenticity of the fossil
- (E) excited about the magnitude of his discovery
